Paving the way

RadiMation®

Structured Migration - Paving the way

In order to ensure a Risk free and seamless migration Raditeq has developed a project-based approach for EMC test laboratories to transfer from any EMC test software platform to RadiMation Pro, the RadiMation Structured Migration plan. RadiMation is leading edge EMC test software developed and supplied by Raditeq B.V. (The Netherlands).

Step 1: Inventory Phase

During this phase, Raditeq will make an inventory of the current configuration of the EMC test software in respect to the number of test computers, which specific EMC tests are automated, what EMC test & measurement instrumentation is being used and what are the demands and requirements for the new situation. This inventory phase is provided Free of Charge.

Step 2: Inventory report + Fixed price offer

Based on the Inventory phase, Raditeq will provide an inventory report with a scaled complexity value including an offer a fixed price quote for the migration to the RadiMation Pro software including:

- The most economic configuration of RadiMation Pro licenses, that covers the needs
- All necessary device drivers for the EMC test & measurement instrumentation
- On-site installation & training at the customer premises
- Estimated delivery time

Step 3 : Implementation & Delivery

After the receipt of the purchase order the Implementation & Delivery phase will commence. The ordered RadiMation Pro licenses will be delivered, and the software will be installed at the customer EMC test laboratories test computers by an experienced RadiMation Pro software engineer. The following services will be provided:

- RadiMation Pro software will be installed and configured on each test PC
- Proper operation of instrument device drivers will be verified
- Performing a system calibration and verification using customer instrumentation
- Joint draw up of an EMC test and saving the test results
- Creation of an automated test report based on a customer specific template
- Initial hands-on training for the EMC test engineers
- Answering any specific customer questions

Step 4: Support & Aftercare

As part of the RadiMation Structured Migration plan, Raditeq will provide remote support & upgrade services for a period of two years calculated from the installation and training date. During the period the following services are provided:

- Fast fix or workaround for any high severity issues (bug)
- Development of device drivers (when needed)
- Minimum two times per year release of a new major version with new or improved functionality
- Direct support by RadiWiki website, telephone, email or remote (MS Teams, Teamviewer)
- One (1) day on-site support service (planned in mutual consultation)

Leading edge EMC test software

In over 30 years RadiMation has become the leading EMC test software used by many renowned and or accredited customers all over the world. The software aims at automating EMC testing instead of merely controlling test equipment. It supports all relevant standards for all kind of industries edge . Our error checking device drivers and the option to store all raw data, ensures high quality measurements.

Open Software for your devices!

With over 6.000 device drivers, RadiMation supports almost every EMC measurement instrument from over 160 brands. Its automated report generator saves valuable time of engineers and frees them from tedious work. More important our evolutionary approach provides investment protection: The RadiMation software is now in its 6th generation and still provides backwards compatibility to the first version.
